Briefkasten &  
Briefkastenanlagen

III. 10/1

First Class fully insulated door side system model 02-941 ISO  
 aluminium front plate and mail slot flap  
 I/D compartment with intercom grid 21-174  
 doorbell button 21-216FW  
 name plate 21-134  
 module preparation for modules to be supplied by the customer (fingerprint, camera)  
 House number engraving flush with milky acrylic glass and illuminated with LED

III. 11/1

**Economy Class**  
 (simple and functional design)

- conventionally proven mail slot flaps
- front plate 24 - 44 mm, completely heat-insulated
- LM intercom grid, plastic doorbell/light sensor
- standard colours: EV1 at LM front, RAL 7016, RAL 8022, RAL 9007, RAL 9016 and DB 703, all other colours with a colour surcharge
- standard lock 21-109

III. 11/2

**Business Class**  
 (model for sophisticated demands)

- SCS version (dampened mail slot flaps) at no surcharge
- front plate 24 - 44 mm, completely thermally separated
- punched intercom grid, stainless steel doorbell/light sensor
- LED backlit flush-mounted
- name plate
- reinforced pin cylinder with master key function 21-120

III. 11/3

**First Class**  
 (fully-insulated model)

- flush-mounted, isolated flap with Soft-Close-System®
- front plate 30 - 44 mm, thermally separated
- laser cut intercom grid
- flush-mounted stainless steel doorbell button with ring lighting
- LED backlit flush-mounted
- name plates
- housings and removal doors insulated, incl. surrounding seal
- reinforced pin cylinder with master key function 21-120

**Flush-mounted insulated mail slot flaps**

The fully-insulated door side systems has a flush and insulated flap with a soft-close system and a finger recess for easy opening. The mail slot flaps are fitted with a return brake and interlock in order to prevent rattling noises and wind effects. As is the case with all door side system, mail is thrown in from the front and removed from the rear or the interior compartment.

- with flush-mounted, illuminated house number made of plexiglas
- prepared for on-site installation components (camera, fingerprint, etc.)
- intercom/doorbell system
- flush-mounted, illuminated doorbell buttons
- all lighting elements are designed in long-life and energy-saving LED technology.

The front plate can be thermally insulated in various insulation thicknesses for door side systems. All standard systems are RC2 certified!

III. 12/1  
First Class fully insulated door side panels Model 02-841 ISO  
aluminium front plate and mail slot flap  
I/D compartment with intercom grid 21-174  
doorbell button 21-216FW  
name plate 21-134  
LED strip light  
street/house number engraving

**Standard model:**

- fully-insulated inner box with 10 mm insulation all around
- door 10 mm insulated with additional rubber seal
- mail slot flap insulated with a soft-close system
- front plate from 30 mm installation thickness

III. 12/2  
fully-insulated mailbox design

**Front plates for door side systems with different insulation**

In the case of door side systems, the insulation thickness of the corresponding front panel can be selected in accordance with the structural requirements.

**The different front plate types**

There are two different versions, which are available in stainless steel or aluminum:

Simple front plate without thermal insulation 02-557

Thermally separated front plate 02-559

The box is located on a separate rear plate which is thermally separated on the insulation layer. This solution represents the best possible thermal insulation that can be achieved.

If desired, the front plate thickness can also be matched to the existing fender profile within certain limits. The standard thickness is 24 mm, alternatively also 28/32/36/40/44 mm. All standard systems are RC2 certified!
