

Avantgarde

Superior class mailboxes

Briefkasten &
Briefkastenanlagen

The basic model

Freestanding letter boxes
Recommended installation height is 1600 mm from floor level (FFL).

Letter box systems with base plates

Letter box systems for concreting

Fastening with base plates

For optimal mounting we recommend the use of M12 bolts. The ground has to be firm and clean.

Concreting in

The mailbox comes with a total height of 2000 mm, allowing 400 mm for concreting. As a foundation we recommend a concrete cube of about 400 x 400 mm in volume.

Letter box systems for flush-mounted mounting

For flush-mounting letter box systems there are two different frame systems. In addition to the standard angular frame, we also offer a special shadow gap frame with a small visible surface as shown in the illustration below. This shadow gap ensures that the appearance of the letterbox system is emphasized against the background whilst sitting flush with the wall. The modern and timeless design results in a harmonious overall image, and integrates the mail box system perfectly into the wall.

Letter box system for wall mounting

III. 4/1

Double letter box system with intercom box. Bell pushes with LED lighting. Letter box with second name plate and tag "NO JUNK MAIL".

III. 4/2
